Important note:

In addition there are specific exclusions and limitations that will apply to certain trades and you should discuss your specific requirements with your broker/intermediary to ensure the cover provided is suitable for your needs.

For example:

For Roofers

Cover will be restricted only for work on buildings of not more than four floors (including basement and attic) occupied solely as private dwellings, shops, offices, hotels, public houses, guest houses, schools, colleges, residential, retirement or nursing homes.

In addition the use of heat and fixed wood working machinery is excluded.

A £250 excess will apply.

Clerical and Professional Trades such as Architects and Accountants

Cover will exclude Professional Indemnity and manual work away.

A £100 excess will apply.

Important notes

Application of heat and fire precautions

Please see below a copy of the policy wording relating to the precautions required when carrying out work involving the use of heat.

This condition does not override any Endorsement on the Policy excluding the use or application of heat or use of any equipment or materials otherwise covered by this condition.

It is a condition precedent to any liability of the Company that the following precautions will be complied with by The Insured and/or any Employee and/or any of their Sub Contractors whenever work is undertaken away from the Insured's own premises involving the use of electric oxy-acetylene or other welding or flame cutting equipment, blow lamps, blow torches, hot air guns, tar bitumen or asphalt heaters or any other work involving the use or application of heat or the use of Angle Grinders.

All work involving the use or application of heat

A thorough examination of the immediate vicinity of the work including the area on the other side of any wall, door, partition, roof or other horizontal structure shall be made to ensure that no combustible materials (including materials to be worked upon or which have been worked upon and, to the greatest extent practical, any materials in the course of being worked upon) are in danger of ignition by direct or conducted heat.

Any combustible material (including materials to be worked upon or which have been worked upon and, to the greatest extent practical, any materials in the course of being worked upon) shall be removed to a distance of not less than 10 metres from the point of work and any combustible materials (including materials to be worked upon or which have been worked upon and, to the greatest extent practical, any materials in the course of being worked upon) which cannot be moved to be covered and fully protected by overlapping sheets of non-combustible material or equivalent protection.

There is to be kept available for immediate use at the site of the work either one portable multi purpose dry powder or Carbon Dioxide fire extinguisher with a minimum capacity of 4.00 Kilograms or a water fire extinguisher of not less than 8 litres capacity made to current European Standards and serviced in accordance with current European Standards.

The ignition and operation of all equipment shall be strictly in accordance with the manufacturers instructions.

No lighted or switched on equipment is to be left unattended and hot tools and hot tips not in use are to be placed in incombustible containers.

Any gas cylinders for the equipment used are to be removed from the point of application of heat as far as practicable during use and outside the premises or at least 15 metres from the point of application of heat when not in use.

Important notes

continued

For one hour after completion of each period of work involving the application of heat and after the completion of work involving the application of heat in any area in such circumstances that the area previously worked upon ceases to be sufficiently visible to ensure that any outbreak of fire or signs of the possible outbreak of fire will be noticed in any area or areas in which work has been carried out shall not be left unattended and a thorough inspection of the area surrounding the work including that described in paragraph 1 above shall be made at frequent intervals up to the end of the period of one hour to ensure that nothing is smouldering and there is no risk of fire including the area on the other side of any wall, door, partition, roof or other horizontal structure.

In addition it is a condition precedent to any liability of the Company that whenever the equipment and materials detailed below are in use, the additional precautions specified will be complied with by the Insured and/or any employee and/or any of their sub-contractors whenever work is undertaken away from the Insured's own premises.

Tar bitumen or asphalt heaters

All heating of tar bitumen asphalt or pitch shall be carried out in a suitable vessel and the vessel is to be located at ground level and in the open air.
